

Key Benefits for Surveillance Environments:

Operator Efficiency

- Single task optimised desktop for all critical tasks with rapid switching between transaction elements
- Related or required data is placed at the fingertips of the operators essential in a surveillance environment where time is of the essence
- User configured home page provides automatic situation overview briefing at log on.

Time and Accuracy Value

- Data collection forms provide consistent, timely and accurate format, enabling logical searching, grouping and statistical reporting. All data is audited, source, time and date stamped
- Incident and subject centricity with advanced search tools enables rapid identification of target subject. Subject information system provides access to all related data such as past incidents, status and all associated persons with the target subject without having to access multiple systems or files
- Customisable homepage provides operator specific situation briefing at start of the shift so that staff are able to focus on critical activities

Operational Efficiency

- iTrak provides an integrated platform enabling rapid collection, categorization and analysis of surveillance observations with the ability to escalate this information into a comprehensive investigation
- Daily log provides rapid capture and classification of all suspicious observations leveraging the effectiveness of CCTV infrastructure investment
- Transaction and data can be shared on an, as needed basis for collaboration, eliminates lost time by paper walking and report searching
- Centralised security / surveillance intelligence data center

Internal Security

- Confidential investigations and transactions can be restricted to an individual or group on a "need to know" basis
- All system transactions (Includes record open, views , edits, changes etc) re audited and time / date stamped under the operator name
- Client Server environment, databases protected within the IT security infrastructure
- Role based access with extensive criteria for permission set creation

Economic Value

- Application specific modules, provides a cost effective and time efficient solution to adding new tools for specific transactions and tasks such as game and slot audits.
- Enterprise level handles unlimited properties and CAL's significantly reducing the cost / property in multi-property deployments
- Continuously evolving modular platform using the latest technology tools, enabling integration and addition of new technologies significantly reduces potential system obsolescence
